

# Manage Devices... *Anywhere... Anytime!*™

## Easily, conveniently and securely through the cloud.

### AVTECH'S Cloud Solution For Monitoring **Room Alert**®

#### MONITOR, ALERT...

GoToMyDevices is AVTECH's new cloud monitoring service designed for new and existing Room Alert users. It provides the ability to easily monitor temperature and environmental conditions from anywhere, at anytime, via the web, regardless of your web interface of choice. Use GoToMyDevices to easily view all connected sensor and monitor devices. There is no software to install, no email server to configure, no complex configurations or concerns about network compatibility, no disk space consumption, and no need to run back ups... it's all handled for you in the cloud. Available data includes the sensor and monitor status, sensor values, time of last update, alert status, time of last alert, contacts, provider and more.

#### LOG, GRAPH...

GoToMyDevices allows users to log all device data for historical review, analysis and verification. Sensor and device data is logged in the cloud and protected by professional hosting services to provide the greatest reliability available. Users can easily display values over time on a graph. Time and date ranges are adjustable and interactive with zoom features. An output to PDF option allows snapshot views to be created and saved on the fly.

#### VIEW, REPORT...

The GoToMyDevices dashboard is a user's quick view of their organization's highest and lowest temperature and humidity readings among all connected devices. The graph shows trending of sensor values over the last 24 hours and gauges show current readings. Users can easily create and save custom reports for different device types, groups of devices, teams, locations and other criteria. Reports pull data from any sensor or device channel network-wide, allowing side-by-side comparisons within a graph, and providing complete flexibility as to what can be included within a report.

#### MANAGE, PROTECT...

Environment monitoring in facilities of all types has become a critical part of 'Disaster Prevention' for professional managers everywhere. Thankfully, it's easy to stay informed about important environmental changes with Room Alert monitors and GoToMyDevices.com. The powerful tools enable your team to drill down to the important information or trends they desire, as well as be alerted immediately when problems begin. GoToMyDevices.com allows managers to get the view and insight they need for better decision making, faster response and future planning. This leads to greater uptime for your organization, lower downtime between hardware failures, smarter energy consumption and peace-of-mind for managers who can be assured that all is well when they are away.
